Education

Civil engineer in informatics, Technical University of Denmark, august 2008.

Experience

Developer - Firmafon - 2013

Keywords: *Angular.js, Cordova, Ruby on Rails, Freeswitch, Puppet, RabbitMQ*

One of three developers, with main responsibility for our apps. Both in browser and on mobile.

Built our internal sales settling tool.

Senior Developer - Issuu - 2012-2013

Keywords: *Javascript, Ruby on Rails, node.js, SASS, Grunt*

Lead developer on Magma which is written in Ruby on Rails.

Works on issuu.com frontend, where I'm responsinble for certain areas.

autobutler.dk - 2011-2012

Keywords: *Project management, Ruby on Rails, Heroku*

In order to keep their product evolving Autobutler hired me to take care of the development.

- General analysis, design and implementation in *Ruby on Rails*.

Benjamin Media - 2009-2010

Keywords: *FreeBSD, Ruby on Rails, Capistrano, Unicorn, PostgreSQL, server architecture, creditcard payment, security*

At Benjamin Media, besides implementing features on our applications, my responsibility was to make our applications scale and keep them running smoothly.

- Analyzed our application, pinpointed and solved bottlenecks.

- Did a major restructuring of our servers switching from Mongrel to Unicorn.

- Implemented credit card payment on our subscription signups.

Gigahost ApS - 2008

Keywords: *Linux, PHP, webudvikling, Apache, MySQL, serveradministration, selvstændigt, Mogile FS*

- Configured the distributed file system Mogile FS to be used for images on speek.dk among other things.

- Implemented a domain renewal system for Gigahost customers to use to manage their domains.

- Configured PowerDNS and an administration system around it.

Other projects

Syncing Tasks - 2011

Keywords: *iPhone/iOS app development, Objective-C, Ruby on Rails, Google Web Toolkit (GWT), Unicorn, nginx*

I wanted a task manager that synced to my iPhone like my mail and calendar did (using Google Sync).

- Implemented an iPhone application using *Objective-C*.

- Implemented a web application using *Ruby on Rails* and *Google Web Toolkit*.

- Configured a server to run the application using *nginx* and *Unicorn*.

- Designed and implemented the marketing site at www.syncingtasks.com.

You can read more about Syncing Tasks at www.syncingtasks.com.

hurtigfaktura.dk - 2008

Keywords: *Ruby on Rails, HAML, LATEX*

I needed a quick and easy way to generate an invoice, so I created hurtigfaktura.dk to do just that.

- Implemented a small application in Ruby on Rails running on hurtigfaktura.dk.

- Setup LATEXon a Linux server to generate the invoices.

Image archive for Personalestyrelsen - 2007

Keywords: *Ajax, Java, GUI* Personalestyrelsen needed a system to keep track of images bought for publications.

- Implemented an application using ASP as backend and Google Web Toolkit as frontend.

I love

- **Software development**, being *my* tool to make the world a better place.

- **Beautiful, simple and user friendly design**, being the way to make the world an easier and more aestheticly pleasing place to be.

- **Ruby on Rails**, being a simple framework, that allows me to create good products easily.

- **Innovation**, being the process of identifying needs and proposing creative solutions.

Personal

Born december 12th, 1980.

I **am** positive, calm, ambitious, engaged.

I **love** quality, simplicity, transparency, innovation, good design.

Personal interests

Music, sport (running, swimming, mountainbiking), philosphy, travelling.
